REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

In view of the applicant's amendment, the prior art of BARBEE and LAN is overcome. Present claims as amended on 1/22/2004 require for the intercalant to be polyoxypropylene diamines. In the method claim the diamines compound is treated with acid. As a result cationic species is formed and the compound is then capable of undergoing cation exchange with clay. Treatment of diamines compound with acid would result in making of di-ammonium compound that is not present in the prior art of BARBEE and LAN.

Newly found disclosure of LAN (US 6,262,162) discloses use of multi-charged ammonium compounds, however these compounds are substituted with alkyl that may at best the alkyl can have alkoxy substituent. The prior art of LAN also does not teach the polyoxypropylene diamines of the present invention.

The term "molecular weight" of the present invention is viewed as definite by the way of the examples on page 4 of the specification.

In view of the above discussion, pending claims 1, 5-9, 12-15 are passed to issue.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
